

Implementation and Data Coaching

Take steps to ensure optimum student results

Students should ultimately benefit from teachers' professional development. However, research tells us that very little of the knowledge gained in professional development actually impacts instructional practice unless it is paired with job-embedded coaching. Renaissance Learning™ Implementation and Data Coaches bridge this gap by helping teachers examine data supplied by the products and then respond to it by taking specific actions in their classrooms. This ongoing support following onsite professional development helps to ensure students get the greatest benefit from Renaissance Learning solutions.

Each Implementation and Data Coaching session is planned in advance to ensure it provides the exact support needed, which includes:

- Facilitation of grade-level data analysis and planning
- Facilitation of question and answer sessions on instructional best practices

In addition, the Implementation and Data coach supports a core team of educators (the principal and two designated teachers) by being a single point of contact for questions that arise throughout the year.

With Implementation and Data Coaching, teachers will:

- Deepen understanding of Renaissance Learning resources being implemented
- Gain deeper insight into student data to inform their work
- Monitor progress and student growth
- Plan next steps to meet student needs
- Assess level of implementation to ensure students are getting maximum benefits from their Renaissance Learning resources

Learn how you can close the gaps between Knowing, Doing, and Achieving by contacting your Renaissance Learning representative, calling (800) 338-4204, or visiting www.renaissance.com.
