## Introduction

Teachers share a common goal in trying to help students become lifelong learners who love to read. In order to achieve this, students must devote time to reading appropriate literature (Anderson, Hiebert, Scott, & Wilkinson, 1985; Lewis & Samuels, 2003; Samuels & Wu, 2004; Snow, Burns, & Griffin, 1998). However, simply setting aside time for reading is not sufficient; the time must be well spent. Teachers should ensure that students experience a high level of success in their reading practice.

Key to ensuring success in reading is to personalize student practice, set goals for that practice, and provide a means to monitor progress toward those goals. The Renaissance Accelerated Reader<sup>®</sup> software—a computerized, personalized practice and progress-monitoring system—makes all of this possible.

Following Accelerated Reader Best Practices, Renaissance’s research-based principles that ensure fidelity of implementation, there are three components to goal setting with Accelerated Reader: quality of reading practice (level of success or percent correct), quantity of reading practice, and ATOS book level<sup>1</sup> (i.e., book readability level, challenge level). The Accelerated Reader software and Accelerated Reader Goal-Setting Chart (see Appendix, p. 6) work together to facilitate setting appropriate, individualized reading practice goals for each student for average percent correct on Accelerated Reader Reading Practice Quizzes, quantity of Accelerated Reader points earned (an indication of the amount of time a student has been engaged in reading practice), and average ATOS book level. The guidelines found in the Goal-Setting Chart are supported by research and have been validated empirically. When combined with an educator’s professional judgment, they help to ensure the best outcomes for all students.

## Average Percent Correct Goal

Research shows that high levels of success in academic tasks lead to improved educational outcomes, including large gains in reading achievement (Allington, 1984; Betts, 1946; Rosenshine & Stevens, 1984). In addition, research has found high rates of success are more critical for low-achieving students than for high-achieving students and have more significant effects on achievement than engaged time on task (Marliave & Filby, 1985).

In Accelerated Reader, level of success in reading practice is measured by percent correct on Accelerated Reader Reading Practice Quizzes. Validated by Topping and Sanders (2000), Accelerated Reader Best Practices recommend students average 85% correct or higher. Additional researchers confirmed the 85% correct recommendation by analyzing the reading practice and achievement of more than 40,000 students (Borman & Dowling, 2004; Paul, 2003). Averages of 90% and higher were associated with even greater gains. Results showed that percent correct on Accelerated Reader Reading Practice Quizzes was more important to student reading achievement than amount of reading or book readability levels. At all achievement levels, students experienced greater normal curve equivalent (NCE) gains as percent correct increased (see Table 1, next page).

---

<sup>1</sup> ATOS book levels are determined using Renaissance’s scientifically-based ATOS for Books Readability Formula. For more information, see Milone, 2014.

**Table 1: Students Experience Greater NCE Gains as Percent Correct Increases**

Grades 2–12 (N = 45,670)

Student Achievement Level (Percentile Range)	Average Percent Correct Range				
	Below 65%	65%–74%	75%–84%	85%–94%	95%–100%
0–20	–2.08	–0.74	1.57	5.01	3.44
21–40	–3.13	–1.18	0.85	4.72	6.35
41–60	–4.66	–1.06	0.23	5.29	6.77
61–80	–3.95	–2.78	–0.30	3.21	6.08
81–100	–5.72	–4.78	–2.18	2.11	4.93

*Adapted from Paul, 2003*

*NCEs are a way of representing percentile scores so that they can be accurately averaged and compared with each other. Because NCEs are derived from percentiles, they measure growth in comparison to national norms. Positive NCE gains mean student achievement grew at a faster rate than national averages. An NCE gain of zero represents the national average.*

## ZPD and ATOS Book Level Goals

### What is ZPD?

A ZPD—or zone of proximal development—is a theoretical concept introduced by the Russian child development psychologist Lev Vygotsky (1978) that has been translated into the realm of guided independent book reading with the development of ZPD ranges. When students read within their individual ZPD ranges, the portion of the text they know helps them understand the unknown portion of the text (Paul, 1996). In independent, literature-based reading, a ZPD is the range of books that will challenge a student without causing frustration or loss of motivation. The Accelerated Reader Goal-Setting Chart (p. 6) includes suggested ZPD ranges educators can use as guidelines when setting reading goals with students.

### Factors influencing ZPD ranges

To initially determine a student’s ZPD range, a teacher will use results from a standardized test of general reading achievement—such as the computer-adaptive Renaissance Star Reading® assessment<sup>2</sup>—to match the student’s GE score to a ZPD range on the Goal-Setting Chart. Then, the teacher monitors the student’s comprehension of books read within that range by checking the results of Accelerated Reader Reading Practice Quizzes and frequently conferencing with the student (via an Accelerated Reader routine called Status of the Class<sup>3</sup>).

Educators should use what they know about each student’s level of reading achievement and appetite for challenge, as well as professional judgment, to set appropriate reading practice goals. If a student is struggling to maintain an average of 85% correct on Accelerated Reader Reading Practice Quizzes, the educator may need to suggest other options to the student, such as reading a shorter book, a book with a lower readability level, or a book on a particular topic of interest. Likewise, a teacher may expand a student’s ZPD range if he/she is especially interested in reading certain books above the current range, and the teacher feels confident the student has a good chance of reading them with comprehension.

<sup>2</sup> The norm-referenced Star Reading assessment is reliable and valid and allows educators to quickly and accurately assess reading scores for students in grades 1–12.

<sup>3</sup> Teachers implementing Accelerated Reader Best Practices use Status of the Class to monitor and guide reading practice by conferencing daily with students to offer support and praise

For lower grade-equivalent (GE) scores, the Goal-Setting Chart provides slightly narrower ZPD ranges to ensure that emergent readers are not frustrated by material that is too challenging. Educators should determine whether these students are capable of reading slightly more difficult books independently, or if support should be provided through activities such as reading a book to or with a student. For higher GE scores, the Goal-Setting Chart ranges are wider to reflect the fact that much good literature contains content appropriate for upper-level students even though it may not be written at high readability levels. For example, *The Crucible*, by Arthur Miller, has an ATOS book level of 4.9, yet the ideas and themes of the play are appropriate for upper-level, advanced readers.

Please note: Book readability is not a measure of content appropriateness. In fact, many books with lower readability levels (such as *The Crucible*) contain content more suitable for older readers. Decisions on the appropriateness of books for particular students are left to the judgment of educators and parents. Renaissance classifies each book that has an Accelerated Reader Reading Practice Quiz with an interest level that refers to the sophistication and maturity level of a book's content, ideas, and themes: LG = lower grades (K–3), MG = middle grades (4–8), MG+ = middle grades plus for more mature middle-grade readers (6 and up), and UG = upper grades (9–12). Interest levels are based on publisher recommendations and should be used in concert with a book's readability level to determine if a book is appropriate for a student to read.

To develop automaticity and gain knowledge from reading, as well as learn new vocabulary, students must read a large quantity of literature (Pressley, 2000). If a student's ZPD range is too narrow, the range of books available to read is limited, as is the opportunity to experience the successful reading practice that is so vital to improving reading achievement.

### **Validation of ZPD ranges**

The ZPD ranges found on the Goal-Setting Chart were developed using actual student reading data and are updated on an ongoing basis. The current ranges were validated based on data from more than 20,000 students during the 2001–2002 school year. Table 2 shows the typical range of books read by students in Renaissance-certified Model and Master Schools<sup>4</sup> compared to the Goal-Setting Chart ZPD ranges. The data show that the typical range of books read is consistent with the Goal-Setting Chart.

---

<sup>4</sup> Renaissance Certification is a professional recognition program for educators who implement Accelerated Reader and/or Accelerated Math according to Renaissance's research-based Best Practices. There are two levels of certification: Model Certification, which confirms that recommended practices are being implemented correctly and students are receiving ample quality reading practice time; and Master Certification, which challenges educators to excel even further.

**Table 2: Comparison of Actual Student Reading to ZPD Ranges on Accelerated Reader Goal-Setting Chart**

Grade-Equivalent Score	Number of Students	Readability-Level Range of Most Books Read by Students	Goal-Setting Chart Suggested ZPD Ranges
1.0	3,637	1.1–2.5	1.0–2.0
1.5	2,349	1.6–2.9	1.5–2.5
2.0	2,673	2.0–3.3	2.0–3.0
2.5	3,204	2.4–3.7	2.3–3.3
3.0	2,060	2.7–4.0	2.6–3.6
3.5	1,912	2.9–4.3	2.8–4.0
4.0	1,226	3.1–4.5	3.0–4.5
4.5	1,459	3.3–4.7	3.2–5.0
5.0	1,363	3.6–5.0	3.4–5.4
5.5	1,173	3.8–5.2	3.7–5.7
6.0	977	3.9–5.5	4.0–6.1
6.5	744	4.2–5.8	4.2–6.5
7.0	321	4.4–6.0	4.3–7.0
7.5	246	4.5–6.1	4.4–7.5
8.0	359	4.6–6.3	4.5–8.0
9.0	215	4.6–6.4	4.6–9.0
10.0	90	4.7–6.6	4.7–10.0
11.0	57	4.6–6.8	4.8–11.0
12.0	216	4.8–6.9	4.9–12.0

## Point and Time Goals

### Accelerated Reader points

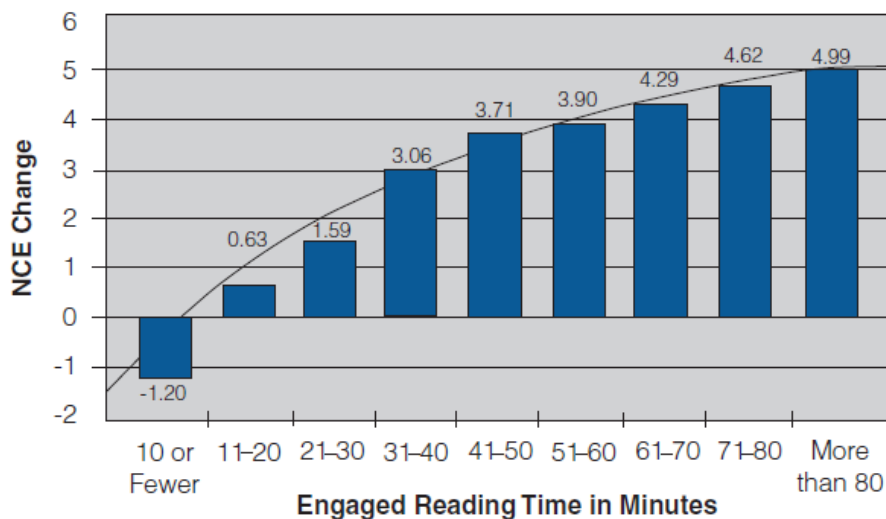

The amount of reading practice students receive is highly correlated to reading achievement gains (Anderson, 1996), but research has shown that it is not just the amount of time allocated to an activity that predicts student achievement. Rather, it is the amount of time in which a student is successfully engaged in activities related to valued educational outcomes (Berliner, 1991; Fisher et al., 1980). This time is called academic learning time (ALT), and it is a critical contributor to academic growth (Batsche, 2007; Berliner, 1991; Gettinger & Stoiber, 1999; Karweit, 1982). Four components distinguish ALT from simple measures of classroom time or “time on task”: (1) Students are actually engaged with the material; (2) the material is at the proper level of challenge—i.e., in their zone of proximal development; (3) students experience a high rate of success; and (4) both the student and teacher receive regular feedback about performance.

Accelerated Reader points are a powerful tool that educators can use to measure ALT for reading. In Accelerated Reader, points are computed based on the readability level of and number of words in a book. Students earn a portion of a book’s points depending on how well they perform on the Accelerated Reader Reading Practice Quiz. The Accelerated Reader Goal-Setting Chart (p. 6) provides guidelines for the approximate number of Accelerated Reader points students should be able to earn depending on how much time they spend reading, their GE score, and their ZPD range. Using these guidelines, educators can determine how well students are utilizing time provided for reading practice and whether they are reading materials at the correct level of challenge.

The Goal-Setting Chart suggests Accelerated Reader point goals for 60, 35, 30, and 20 minutes of daily reading practice time. The amount of time a student invests in reading practice each day may depend on several factors, but in general, more is better, provided the student is reading within his/her ZPD range and with a high degree of comprehension. Research conducted by Paul (2003) and validated by Borman and Dowling (2004) as well as Topping, Samuels, and Paul (2007), confirms that students achieve the greatest gains with 60 minutes or more of daily reading practice (see Figure 1).

**Figure 1: Reading Achievement Gains at Varying Levels of Engaged Reading Time**

Grades 2–12 (N = 45,670)

*Adapted from Topping, Samuels, & Paul, 2007*

Many schools, however, cannot find an hour or more in their schedules to devote to this activity. If this is the case, Accelerated Reader Best Practices recommend that at least 30 minutes in elementary and 20 minutes in high school are devoted to students' guided independent reading of self-selected books. At the same time, we urge you to strive for 35 minutes. As Figure 1 shows, this is the "sweet spot" for reading practice—the point at which students achieve the most growth for the least amount of time spent reading.

### Points goals and grade-equivalent scores

The point values on the Goal-Setting Chart are based on a student's GE score. Research on student reading rates shows that the relationship between reading rate and comprehension varies with the age and intellectual ability of students as well as the type of reading materials (Harris & Sipay, 1990). When using point goals, educators should consider the attitude, interests, and abilities of each student and modify the goals as necessary.

### Validation of Accelerated Reader point goals

Renaissance first published Accelerated Reader point goals in 1993, based on a comparison of student reading logs and Accelerated Reader points earned (Paul, 1992). The goals have since been modified and validated based on additional data showing actual student reading behavior, including (1) a comparison of the goals on the Goal-Setting Chart to the number of words read by students as published in several studies on student reading rates, and (2) an examination of data from more than 7,000 students in classrooms known to allocate 60 minutes for daily reading practice. Overall, the results validated the relationship shown in the Goal-Setting Chart between points and engaged reading time for students at all levels.

The research on student reading rates revealed a wide range of reading speeds for students at various grade levels and with different reading abilities as well as several factors that influence student-reading speed, such as the type of material, purpose for reading, length of material, and topical knowledge. To validate the point goals, the expected points shown on the Goal-Setting Chart were converted to words read using the Accelerated Reader points formula<sup>5</sup> and then compared to words read by students in various studies on reading rates (e.g., Allington, 2001; Carver, 1990; Harris & Sipay, 1990). The point goals on the Goal-Setting Chart were found to be lower than students' rates in the published studies but reasonable given the fact that much of this research examined silent reading often for relatively short periods of time under test conditions, which may differ from student reading speeds for daily reading at school.

An examination of data from students in schools known to allocate 60 minutes for daily reading practice also confirmed the point values on the Goal-Setting Chart. Table 3 shows a close relationship between the number of expected points per week for 60 minutes of daily reading from the Goal-Setting Chart and the average number of points per week earned by students in these schools.

**Table 3: Accelerated Reader Goal-Setting Chart Points Align with Average Points Earned per Week**

Grade-Equivalent Score	Goal-Setting Chart Points/Week	60 Min. Schools Average Points Earned/Week	60 Min. Schools Number of Students
1.0	1.7	1.9	862
1.5	1.9	2.2	645
2.0	2.1	2.4	770
2.5	2.3	2.7	945
3.0	2.5	2.9	675
3.5	2.7	3.2	596
4.0	2.8	3.3	397
4.5	3.2	3.5	487
5.0	3.5	4.1	486
5.5	3.9	4.1	439
6.0	4.2	4.8	377
6.5	4.6	5.3	299
7.0	4.9	5.6	155
7.5	5.3	5.8	102
8.0	5.6	6.4	134
9.0	6.3	7.3	84
10.0	6.9	7.3	30
11.0	7.6	7.8	21
12.0	8.3	8.7	61
<b>Total</b>			<b>7,565</b>

<sup>5</sup> Students earn a portion of a book's points depending on how well they perform on the Accelerated Reader Reading Practice Quiz. The number of points earned equals [(10+ Reading Level) x (Words in Book/100,000)] x Percent Correct.

# Appendix: Accelerated Reader Goal-Setting Chart

Beginning in 2012, if you have Accelerated Reader and Star Reading on Renaissance Place Real Time, the software will automatically recommend a ZPD and goals for each student. Otherwise, use Table A1 and the guidelines below, or the online **Accelerated Reader Goal Calculator**: <http://arggoals.renlearn.com/>, to help set reading practice goals for your students, based on their reading level and the amount of time you provide for practice.

- 1 **Identify ZPDs.** Identify each student’s grade-equivalent (GE) score with a standardized assessment, such as Star Reading, or estimate a GE based on a student’s past performance. The corresponding ZPD is a recommended book-level range for the student. If books in that range seem too hard or easy for the student, choose a new range or create a wider one that better matches the student’s abilities.
- 2 **Set the Average-Percent-Correct Goal.** The most important goal for all students is to average at least 85 percent on Accelerated Reader Reading Practice Quizzes. Averages of 90 percent and higher are associated with the greatest gains. If a student struggles to maintain this average, talk to the student and find out why. Then decide on a strategy that will lead to success.
- 3 **Set Point Goals.** The chart shows the number of points students are expected to earn based on GE and time spent reading. (Point goals for emergent readers are based on scaled scores from Star Early Literacy.) These are estimates. Set goals that are realistic for individual students. Points earned by emergent readers will reflect time spent listening to books read aloud and reading with a partner, as well as some independent reading.

**Table A1: Accelerated Reader Goal-Setting Chart**

Grade-Equivalent Score	Suggested ZPD	60 Min. Daily Practice			35 Min. Daily Practice			30 Min. Daily Practice			20 Min. Daily Practice		
		Points per Week	Points per 6 Weeks	Points per 9 Weeks	Points per Week	Points per 6 Weeks	Points per 9 Weeks	Points per Week	Points per 6 Weeks	Points per 9 Weeks	Points per Week	Points per 6 Weeks	Points per 9 Weeks
Emergent Reader		1.7	10	15	1.0	5.8	8.8	0.9	5.0	7.5	0.6	3.3	5.0
